GAIN Report #SI1002

Slovenia

Grain and Feed

Very Brief Wheat Harvest Update

2001

Approved by:

Paul Spencer-MacGregor

U.S. Embassy

Prepared by:

Andrej Udovc

Report Highlights: The quality of Slovenia's recent wheat harvest is lower than last year but not exceptionally bad. The size of the harvest is average for Slovenia at around 180,000 metric tons (MT). From this, 115,000 MT will likely be bought by domestic milling industry. Estimated total domestic consumption is not expected to change. The milling industry will likely use around 200,000 MT and 70,000 MT will be used for feed.
